

Product: Thermocouples
Codes: T20-900 & SUTC

Product Overview:

Thermocouples are used in a variety of appliances such as boilers, hobs, cookers and gas fires.

These are thermoelectric temperature sensors, which create a small electrical voltage to control an electromagnetic valve, keeping it open and if it loses its electromagnetic current, it will shut off.

The super universal thermocouple comes with multiple threaded nuts for use in a wide range of appliances.

They are compatible with clamp-in, push-in or screw-in type pilot burners.

Features & Benefits:

Multiple fittings to suit different appliances (SUTC)

Strong and malleable copper tubing

Fits 90% of all gas appliances

Suitable for:

Hobs
Boilers
Cookers
Gas fires

Product Code	Description
T20-900	Standard Universal Thermocouple 900mm
SUTC	Super Universal Thermocouple
