

Product: vFlow PRV Blow-off Cap

Overview:

For a quick and easy installation of pressure relief valves (PRVs.) The simple design consists of a single piece of copper formed to achieve the required redirection of discharge back against external walls in a safe manner.

Features & Benefits:

- One fitting, single solder joint
- Cuts installation time
- Low profile
- Can be installed internally (particularly useful for when working at heights)
- Small enough at 16mm to be fitted using standard 21.5mm sleeving.
- Cost competitive with the traditional method of swan necking the discharge pipe when considering it can be fitted quicker and with less risk to the installer.

Specifications:

	VFLOW15	VFLOW22
Size	15mm	22mm
Length	30mm	26mm
Diameter	17mm	25mm
Weight	13g	20g
Bag QTY	25	25
Box QTY	600	300

Standards & Approvals:

Manufactured to EN 1254:1998

Typical Installation:

Recommended installation direction to avoid water ingress.
