

Product: Monobloc Tap Adapters

Product Overview:

When fitting a flexible hose swivel nut directly on to an isolating valve, the chamfered edge on the ISO valve can cut into the washer, causing damage and potentially cause a leak.

Our flexible hose tap adapters can be fitted straight into a 15mm isolating valve, creating a flat face for the flexible hose swivel nuts, thus preventing damage and leaks. This is also a cost-effective alternative to fitting a separate length of pipe with a MI fitting.

Features & Benefits:

- Designed to fit into a 15mm Isolating valve
- Provides a flat face for flexible hoses with swivel nuts
- Helps prevent leaks by protecting the flexible hose washer
- Cheaper alternative to using a separate MI fitting
- Quick installation
- WRAS approved
- Fully recyclable packaging
